Energy Conservation Proposal

Write a 150-200 word proposal to help our community conserve natural resources. Your idea must be creative, simple, realistic and informative. Use this page to help you brainstorm. Type or neatly hand write your proposal on a clean sheet of paper. Due the first week of school.

Simple

- Idea should have one main focus.
- Keep proposal clutter free.
- Too many ideas can overwhelm the audience.

We need new ideas from young bright scientists like yourself. Think outside the box. Give an idea that we haven't heard yet. Be creative!

Creative

Realistic

- Make sure your idea can help people in our community.
- Think about what your mom, dad, or friends need to help them save more energy!

When you provide background information, you help your audience understand why your idea is important. Provide one statistic with the source.

Informative
